

VF18-ZC(1-3) (14.413°N, -90.829°W)

- Pyroclastic flow samples collected from the Las Lajas drainage, 8.75 km from the crater, by Ing. Omar Flores Beltetón and students on July 12, 2018.
- Three gallon bags of material were collected and numbered as Zona Cero Samples 1 to 3. The three images represent the sampling locations, which differ slightly around the coordinate locations.
- Particle Sizes:
 - Fine (<0.5 mm) ash particles abundant
 - Small crystalline particles (0.5-2 mm) with abundant olivine, pyroxene, plagioclase
 - Dense basaltic rocks (5-10 cm)
